

ABHIJITH S NAYAK

Information Science Engineer

Profile

Aspiring Information Science professional passionate about blending technology, analysis, and communication to create meaningful impact in the IT industry. Eager to grow through dynamic opportunities that challenge and inspire innovation

Projects

● Hotel management (Python)

Hotel Bill Management for food orders is a system that streamlines the process of tracking, billing, and generating invoices for food and beverage services ordered by hotel guests. This system is integrated into the hotel's overall management software and allows for accurate billing based on the customer's food orders.

● Student result web application (Web programming)

The Student Result Web Application is a digital platform designed to manage and display academic performance data for students. It allows teachers and administrators to input, store, and update student grades, while providing a user-friendly interface for students to access their results. The application includes features such as secure login, grade viewing, result analytics, and data export options, ensuring an efficient and streamlined approach to academic tracking.

● Providing AI cybersecurity to smartgrid - on going

Providing AI cybersecurity to smart grids involves leveraging artificial intelligence to enhance the security and resilience of critical infrastructure within smart grids. Smart grids are vulnerable to cyber attacks due to their interconnected nature, which combines traditional power systems with modern communication and IT technologies
